#### DETAILED ACTION

1. Claims 1-28 are pending.

#### ***Restriction Requirement***

2. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-7, 10-16 and 19-25, drawn to a method of treating an immune-mediated disease, classified in Class 514, subclass 885.

II. Claims 8-9, 17-18 and 26-28, drawn to immunoglobulin compositions comprising Cohn Fractions II+III, II, or III, classified in Class 424, subclass 130.1.

The Inventions are distinct, each from the other because:

3. Groups II and I are related as product and process of using. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method of Group I can be practiced with other non-immunoglobulin compositions, such as prednisone, and the immunoglobulin composition of Group II can be used to establish background levels of antibody binding in antigen-detection assays such as for detection of increases in serum specificities for a particular antigen in diseases.

4. These inventions are distinct for the reasons given above. In addition, they have acquired a separate status in the art as shown by different classification and/or recognized divergent subject matter. Further, a different field of search would be required based upon the structurally distinct products recited and the various methods of use comprising distinct method steps. Moreover, a prior art search also requires a literature search, which would not be completely co-extensive. It is an undue burden for the examiner to search more than one invention. Therefore restriction for examination purposes as indicated is proper.

#### ***Species Election***

5. This application contains claims directed to the following patentably distinct species of the claimed Invention I: wherein the immune-mediated disease is one of the diseases set forth in claims 7, 16 and 25.

These species are distinct because the pathological conditions differ in etiologies and therapeutic endpoints; thus each condition represents patentably distinct subject matter.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 10 and 19 are generic.

Art Unit: 1644

6. This application contains claims directed to the following patentably distinct species of the claimed Inventions I and II: wherein the Cohn Fraction is:

- A) Fraction II+III,
- B) Fraction II alone, or
- C) Fraction III alone.

These species are distinct because they have different properties; thus each Fraction represents patentably distinct subject matter.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is truly generic.

7. Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. § 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. M.P.E.P. § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

8. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
